## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-14, drawn to a technical feature of at least two high-mannose oligosaccharide cluster on a scaffolding framework.

Group II, claims 15-19, drawn to a technical feature of a method of making a high-mannose oligosaccharide cluster.

Group III, claims 20-24 and 26-29, drawn to a technical feature of a method of inducing HIV neutralizing antibodies and a method of combating HIV infection.

Group IV, claims 30-33, drawn to a technical feature of a method of detecting candidate compounds that interact with oligomannose sugars on HIV gp120..

Group V, claim 34, drawn to a technical feature of an antibody that binds to a high-mannose oligosaccharide cluster.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature shared among the inventions listed as Groups I-V is at least two high-mannose oligosaccharide cluster on a scaffolding framework. The noted shared technical feature does not provide a contribution over the prior art, as evidenced by the teachings of Kuo et al. (WO 98/04272). Kuo et al. discloses mannose-containing

Art Unit: 1648

oligosaccharides. Page 15 states "a suitable oligosaccharide e.g. Man8 or Man9, can be assembled in multivalent form by linking one or more of such molecules to a scaffold carrier molecule, thus providing a plurality of "high mannose-type" structures on a single molecule using methods known in the art." Hence, in the absence of a contribution over the prior art, the noted shared technical feature is not a shared special technical feature. Without a shared special technical feature, the inventions listed as Groups I-V lack unity with one another.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
